

The Ideal Upgrade

For Small Format Interchangeable Cores

In many facilities, small format interchangeable core (SFIC) locking hardware offers an ideal security system because the cores can be quickly and easily replaced by non-technical personnel, which enables easy rekeying and well maintained security.

INTERCHANGEABLE CORE

KeyMark® offers the additional security advantage of patented key control. Using KeyMark SFICs throughout a facility ensures enhanced security by preventing unauthorized key duplication.

RIM & MORTISE CYLINDERS

Although KeyMark is designed for existing SFIC systems, the KeyMark line also includes rim, mortise, and knob-style cylinders; allowing doors with hardware other than SFICs to be easily integrated within a broad key system.

HIGH SECURITY LOCKS

WHO HAS THE KEYS TO YOUR FACILITY?

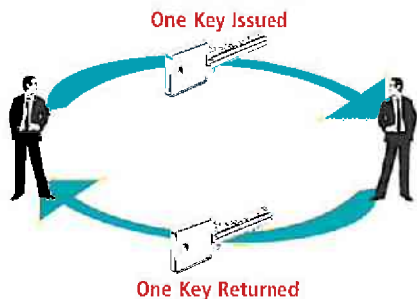

Each time a key is issued to a new user, it creates the opportunity to put the facility, and the people who use that facility, at risk. Standard locking systems without patent protected keys allow anyone who gains possession of a key to easily and inexpensively make a copy. With an unauthorized duplicate key, a thief could have complete access to a building, its physical and intellectual property, and the people inside. Patent protected KeyMark® locking systems ensure that the keys to a facility may only be duplicated by certified Medeco® dealers, or contracted end-users, and only with the proper authorization.

SECURITY BEGINS WITH KEY CONTROL

NO KEY CONTROL

Regular keys can be easily copied at any hardware or discount store. Multiple keys often become unaccounted for over time, which can allow an unscrupulous person to gain access, either directly or indirectly.

ASSURED KEY CONTROL

Patent protected KeyMark key control ensures that only designated people can duplicate keys, which effectively controls how many keys are issued and

PATENT PROTECTED KEY CONTROL

From The Company That Invented It

KeyMark® is a Medeco® brand. What passes for key control at other lock companies simply isn't good enough at Medeco. More than 35 years ago, Medeco pioneered the concept of patented key control and has been perfecting it ever since. When Medeco builds a lock, it's built solid. Manufactured in the company's ISO 9001 certified factory, KeyMark cylinders are solid brass for quality and durability, and available with either six-pin or seven-pin cylinders, spooled tumbler pins, and with an extraordinary number of unique keyways.

KEYMARK ADVANTAGE

- ✓ Patented key control (prevents unauthorized key duplication)
- ✓ Custom key coining (for added security)
- ✓ Lifetime warranty on keys
- ✓ Pick resistant keyway (for added security)
- ✓ Raised plugface (ensures against key breakage; increases cylinder life)
- ✓ Solid brass machined construction with tight tolerances (ensures long lasting, quality operation)
- ✓ Available in most cylinder types (provides flexibility for different security requirements)
- ✓ Available in all architectural finishes (easily matches existing hardware)
- ✓ Temporary construction cores available
- ✓ Manufactured in the USA (proven security and quality)

For complete details visit an authorized Medeco dealer, or call 1.800.839.3157 (in Canada, please call 1.888.633.3264) or visit www.medeco.com

Take a look at the keyway on a KeyMark cylinder and then take a look at the keyway on a standard lock. The KeyMark keyway is angled. This angled keyway is what helps to distinguish KeyMark from other locks. KeyMark's exclusive "Security Leg®" design gives the key blank its unique shape and provides a higher level of security against unauthorized key duplication, as well as pick or comb attacks. The "Security Leg" keyway provides assurance that other key blanks won't operate -- or even fit into -- KeyMark cylinders.
